

Motorola V.series[®] 66

The Cosmopolitan Communicator

Motorola's V.series 66 combines sophisticated good looks and the latest cellular technology in one elegant package. With up-to-the minute features including GPRS (General Packet Radio Services) technology, voice activation, real time clock, currency converter and calculator, this tiny tri-band phone makes a smart travel companion – whether it's across town or across continents.

- *Traveling Light*
The V.series 66 is Motorola's smallest tri-band phone with GPRS technology, in the distinctive clamshell design. Available in radar blue or silver, with a choice of interchangeable bezel inserts, this device can be customized to coordinate with any ensemble, and fits easily into pocket or purse.
- *Internet Autobahn*
The V.series 66's GPRS capability will change the speed and efficiency with which users travel the web and transmit data. A constant connection to the Internet and faster data transmission save both time and costs. When calls are received, the Internet session is put on hold and users can resume the data session where they left off when the conversation is completed.
- *More Than a Pretty Face*
The V.series 66 offers smart button operation, which allows you to answer and end calls as well as access all of your phone book entries with one single button. Among other intelligent features are voice-activated dialing, Voice Note voice recorder and iTAP™ predictive texting for improved speed and efficiency.
- *Effortless Communication*
A completely redesigned user interface makes keeping in touch simpler than ever and offers a myriad of new features, including a date book, message center, up to 500 phonebook entries, 32 user customizable alerts and 32 pre-set ringer alerts, including VibraCall® vibrating alert.
- *Let It Entertain You*
Flight delays and long cab rides will breeze by with the V.series 66 to keep you entertained. Games and an optional FM radio accessory offer tempting alternatives to work.
- **Expected Availability:** Mid-2001 in Asia, Europe and North America
