APPROVED:

David Loveridge
Product Support Manager

Michael J. Hader
GSM Software Development

1. Release Information

Prepared By:	Christopher M. Gattuso
Date:	17 May 1999
Software Version Number:	A0.07.02
IMEISV:	0x15
GSM Software Revision:	Released for Global Field Test
Previous Software Version Number:	A0.06.28
DSP Software Version Number:	61.AB/71.11

2. Feature/Enhancements/Repair Description for A0.07.01

2.1   CLI Phonebook Enhancement

The software was modified to increase the number of digits compared on incoming calls from six to eight.

This enhancement was validated by Motorola Field Engineering.

2.2   Enhanced SMS Delete Function

Software was added to increase the robustness of the SMS Delete All Messages functionality when the message count is at the maximum.

This enhancement was validated by Motorola Field Engineering.

2.3   PLMN Update

The PLMN tables were updated in accordance with the latest MOU specifications.

This modification was verified by Motorola Field Engineering.

3. Feature/Enhancements/Repair Description for A0.07.02

3.1   Phase 2 USSD Support

Added support for Phase 2 USSD.

This enhancement was validated by Motorola Field Engineering.

3.2   Enhancements to Support SIM Cards with SAT Applications

A modification was made in the software to support SIM cards that have SAT applications.

This enhancement was validated by Motorola Field Engineering.

3.3   USSD Phase 1 enhancement on Phase 2 Networks

If a phone supports Phase 1 USSD and receives Phase 2 USSD network rejects, he phone displayed "Can't Access Network". This message is an inaccurate response to the events that are occurring. The phone will now display "Please Try Again" to indicate to the user that the original message was rejected and that the command should be resent.

This enhancement was validated by Motorola Field Engineering.
