

Motorola Timeport™ 270c

Bringing Tomorrow's Technology to Today's Consumers

Motorola's Timeport 270c cellular phone offers users its first phone application with the revolutionary Bluetooth™ wireless technology. Combined with the optional Bluetooth Smart Module and Bluetooth PC card, the phone is a model of efficiency, offering connections between your phone and PC; dial-up networking, automatic synchronization and ad hoc networking – *with no wires*.

- ***No More Wires – Ever***
Whether on the road or in the office, the Timeport 270c is your key to connecting to a wide variety of devices without cable attachments. Access the Internet, send email, check messages – on the go. Gone are the days of carrying bulky cords and trying to find a place to plug them in. Bluetooth connections are virtually instantaneous and do not require devices to be within line of sight.
- ***Do You Hear What I Hear?***
Never has mobile conference calling been so clear. The integrated, hands-free speakerphone provides crystal clear communication. Motorola's patented new technology has increased the audio output of the Timeport 270c for rich, full sound. Even when conferencing with a landline speakerphone, you won't have to ask, "can you repeat that?"
- ***Bigger is Better***
The Timeport 270c's large graphical display shows up to six lines of text (96 characters) and two lines of status icons. With this display, the presentation of the wireless application protocol (WAP) microbrowser is enhanced. Backlighting and excellent resolution also complement this ample display.
- ***Faster, More Effective Communication***
With the Timeport 270c, Motorola introduces its first 4-way, navigation key with "joy-stick" functionality on a wireless phone. Additionally, the Timeport 270c integrates voice recognition allowing users to experience an easier, more efficient method of communication.
- ***Redesigned User Interface***
The Timeport 270c features are enhanced by a completely redesigned user interface. Through extensive consumer testing, Motorola developed its new interface specifically to maximize the advantages of both the new and standard offerings.
- **Expected Availability:** Mid-2001 in North America
