## 4. Disassembly of EF51

All repairs as well as disassembling and assembling have to be carried out in an ESD protected environment and with ESD protected equipment/tools. For all activities the international ESD regulations have to be considered.

For more details please check information in c – market

<https://market.benqmobile.com/SO/welcome.lookup.asp>

There you can find the document “ESD Guideline”.

## 6. BenQ Service Equipment User Manual

### Introduction

Every LSO repairing BenQ handset must ensure that the quality standards are observed. BenQ has developed an automatic testing system that will perform all necessary measurements. This testing system is known as:

### BenQ Mobile Service Equipment

- For disassembling / assembling

	<p><b>Torque – Screwdriver</b> Part Number: F 30032 – P 228 – A1</p>
	<p><b>Opening tool</b> (Case opening without destroying) Part Number: F 30032 – P 38 – A1</p>
	<p><b>Alternative Opening tool</b> Part Number: F30032 – P583 – A1</p>
	<p><b>Tweezers</b></p>

- For testing

All mobile phones have to be tested with the GRT – Software. The service partner is responsible to ensure that all required hardware is available.

For additional Software and Hardware options as well as the supported GRT equipment, please check the GRT User manual.

## 7. Setup of the Software

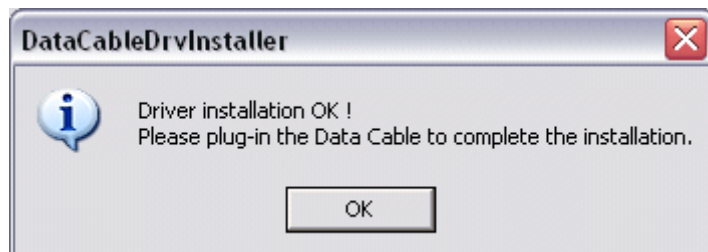

### Download of the required software:

Download the driver, the XCSO software mobile software (core-software and language files) from the Technical Support Page:

**<https://market.benqmobile.com/so/welcome.lookup.asp>**

### Installation of USB – Serial converter boot cable:

Start the “DataCableDrvInstaller.exe” file and follow the instructions of the installer.

Plug in the Data cable and follow the installation instructions to complete the process.

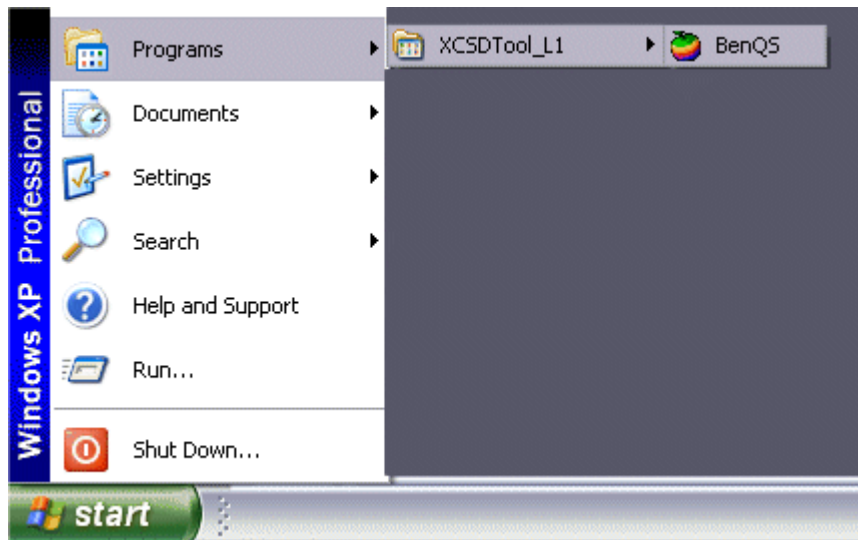

**Check the Comport number of the data cable in the device manager.  
(XCSO tool supports only Comport 1 to 10)**

Technical Documentation	Release 1.0
TD_Repair_L1-L2_EF51_R1.0.pdf	Page 23 of 38

Installation of XCSD tool:

Start "setup.exe" file and follow the instructions.

The installer creates a shortcut in the start menu bar. Start – Programs – XCSDTool\_L1 - BenQS

Technical Documentation	Release 1.0

## 9. Software Download procedure

- Select Download Option (View – Download):

- Select Program Code (example: E22 1 11710.mot) and Language Pack (example E22 L 11711.mot)

Status bar colour scheme:

- yellow waiting for update
- blue update in progress
- red error occurred
- black Comport not available
- green Update successful

- Connect mobile phone with data cable. Phone must be switched off. Click on “Start” button and press the power on button on the handset to start the download. During download process status bar shows the state of the process of P = Program code, L = Language file and S = Set default (if activated). After successful SW download, the status bar of the used Com port is changed to green.
- 

Erase of customer data:

Select the “Power-off set default” option to erase all customer data of the phone during the download process.

- Click the “Set E2p” to erase the customer data without software update.

SW files naming rules:

Program Code    **E22111710**  
Language Pack    **E22L11711**

**E22**   Project name  
    **117**   Program Code  
**L**     Language Pack  
    **117**   Version 1.17  
**10/11** Program Code ID

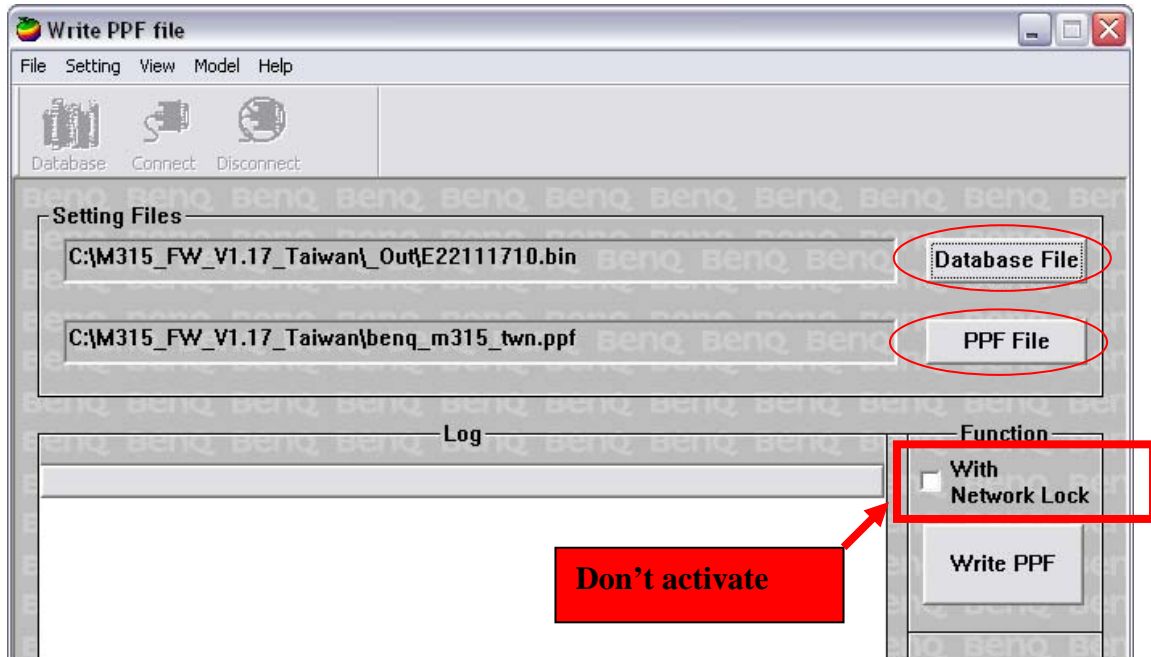

**10. Download PPF (Handset configuration)**

- Select write PPF option (View – Write PPF):

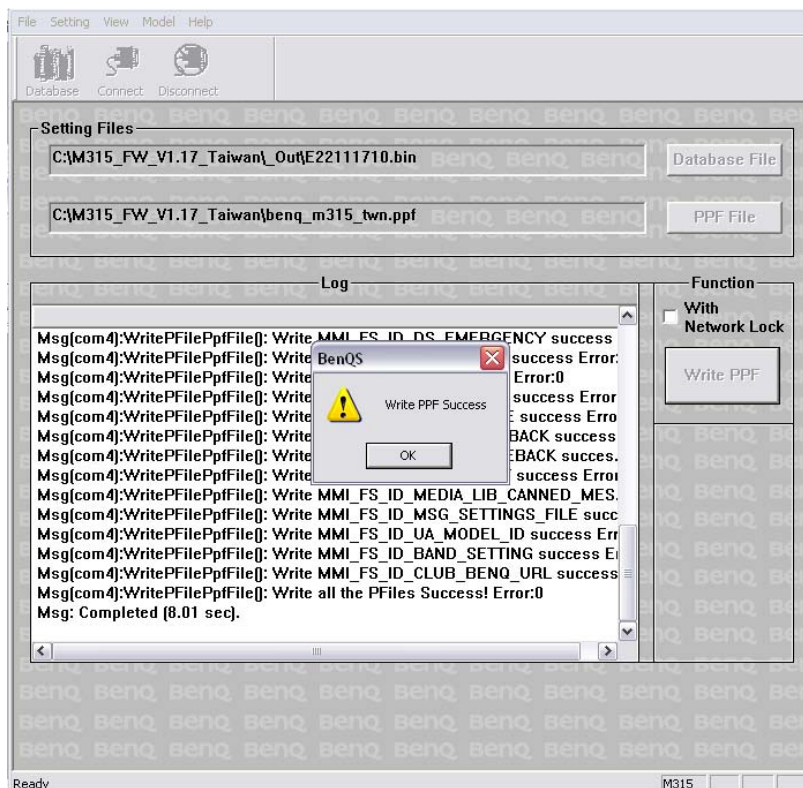

Select                    Database File           (example: E22111710.bin) and  
                          PPF File           (example benq\_m315\_twn.ppf)

## 14. International Mobile Equipment Identity, IMEI

The mobile equipment is uniquely identified by the International Mobile Equipment Identity, IMEI, which consists of 15 digits. Type approval granted to a type of mobile is allocated 6 digits. The final assembly code is used to identify the final assembly plant and is assigned with 2 digits. 6 digits have been allocated for the equipment serial number for manufacturer and the last digit is spare.

EF51 series IMEI label is accessible by removing the battery.

Re – use of IMEI label is possible by using a hair – dryer to remove the IMEI label.

Date code is shown on IMEI label: Detailed description on how to read date code is given in Annex 2.

To display the IMEI number, exit code and SW/HW version, key: \* # 300 #

Code \*#301# activates self diagnosis.

## 15. General Testing Information

### General Information

The technical instruction for testing GSM mobile phones is to ensure the best repair quality.

### Validity

This procedure is to apply for all from BenQ mobile authorized level 2 up to 3 workshops.

### Procedure

All following checks and measurements have to be carried out in an ESD protected environment and with ESD protected equipment/tools. For all activities the international ESD regulations have to be considered.

**Get delivery:**

- Ensure that every required information like fault description, customer data a.s.o. is available.
- Ensure that the packing of the defective items is according to packing requirements.
- Ensure that there is a description available, how to unpack the defective items and what to do with them.

**Enter data into your database:**

(Depends on your application system)

- Ensure that every data, which is required for the IRIS-Reporting is available in your database.
- Ensure that there is a description available for the employees how to enter the data.

**Incoming check and check after assembling:**

**!! Verify the customers fault description!!**

- After a successful verification pass the defective item to the responsible troubleshooting group.
- If the fault description can not be verified, perform additional tests to save time and to improve repair quality.
  - Switch on the device and enter PIN code if necessary unblock phone.
  - Check the function of all **keys** including **side keys**.
  - Check the **display** for error in line and row, and for illumination.
  - Check the **ringer/loudspeaker** acoustics by individual validation.
  - Perform a **GSM Test** as described on page 36.

**Check the storage capability:**

- Check internal resistance and capacity of the battery.
- Check battery charging capability of the mobile phone.
- Check charging capability of the power supply.
- Check current consumption of the mobile phone in different mode.

Technical Documentation	Release 1.0
TD_Repair_L1-L2_EF51_R1.0.pdf	Page 33 of 38

**Visual inspection:**

- Check the entire board for liquid damages.
- Check the entire board for electrical damages.
- Check the housing of the mobile phone for damages.

**SW update:**

- Carry out a software update and data reset according to the master tables and operator/customer requirements.

**Repairs:**

**The disassembling as well as the assembling of a mobile phone has to be carried out by considering the rules mentioned in the dedicated manuals. If special equipment is required the service partner has to use it and to ensure the correct function of the tools.**

**If components and especially soldered components have to be replaced all rules mentioned in dedicated manuals or additional information e.g. service information have to be considered**

Technical Documentation	Release 1.0

GSM Test:

**With the availability of the GRT Test /Alignment software, this tool has to be used to perform the outgoing test!**

>Connect the mobile/board via internal antenna (antenna coupler) and external antenna

(car cradle/universal antenna clip) to a GSM tester

>Use a Test SIM

For Triple Band phones use a separate test case, if the test software allows only one handover.

Skip the GSM Band test cases if not performed by the mobile phone

Example:                   1. Test file                   Band 1 = GSM900 / Band 2 = GSM1800  
                                  2. Test file                   Band 1 = GSM1900

**Final Inspection:**

The final inspection contains:

- 1) A 100% network test (location update, and set up call).
- 2) Refer to point 3.3.
- 3) A random sample checks of:
  - Data reset (if required)
  - Optical appearance
  - complete function
- 4) Check if PIN-Code is activated (delete the PIN-Code if necessary).  
 Basis is the international standard of **DIN ISO 2859**.  
 Use Normal Sample Plan Level II and the Quality Border 0,4 for LSO.  
**Remark:** All sample checks must be documented.
